

Test Information Data Entry Form

Please complete this form with information about your test. It's easy to forget so many details, so write them down while they're fresh in your mind. When you're done, hit the submit button. This will create an e-mail with an attached file containing your data. Send the e-mail to complete the process. When we receive your test sheets, we'll measure them, and generate a test report. The information you submitted by e-mail will be included in the report. (Note: This requires version 6 or later of Acrobat or Adobe Reader.)

If you're submitting multiple tests, be sure to mark each one with a unique identifier, and enter the identifier on the data entry form for that test. You may submit the form multiple times, changing only those items that vary from test to test.

We've organized the information into categories. Some categories may not apply to your test(s), in which case, you should leave them blank.

Client
